(54) Title: SYSTEM FOR SUPPLY OF LIQUID

(57) Abstract: System for supply of liquid comprising a discharge point (15), a liquid line (5, 12, 16, 18) connecting the discharge point to a flow regulator (2, 41), which in an active mode supplies liquid from a source (1, 40), through the liquid line to the discharge point and which in an inactive mode prevents liquid flow through the line; and a liquid purifier (6), which is connected to the fluid line, between the discharge point and the flow regulator and which comprises a UV-light source (10). For achieving reliable automatic activation of the UV-light source upon activation of the flow regulator, the flow regulator is electrically controlled and means are provided for detecting a supply current to the flow regulator and in response thereto activate the UV-light source.
